Realizing Opportunities for English Learners in the Common Core English Language Arts and Disciplinary Literacy Standards

George C. Bunch, University of California, Santa Cruz
Amanda Kibler, University of Virginia
Susan Pimentel, StandardsWork®

Students who meet the Standards readily undertake the close, attentive reading that is at the heart of understanding and enjoying complex works of literature. They habitually perform the critical reading necessary to pick carefully through the staggering amount of information available today in print and digitally. They actively seek the wide, deep, and thoughtful engagement with high-quality literary and informational texts that builds knowledge, enlarges experience, and broadens worldviews. They reflexively demonstrate the cogent reasoning and use of evidence that is essential to both private deliberation and responsible citizenship in a democratic republic. In short, [they] develop the skills in reading, writing, speaking, and listening that are the foundation for any creative and purposeful expression in language. (Standards, p. 3).

This brief paper is intended to contribute to a larger—and longer—conversation about what those collectively responsible for the education of English Learners (ELs) must consider in order to maximize the affordances presented by the Common Core State Standards for English Language Arts and Literacy in History/Social Studies, Science, and Technical Subjects (hereafter referred to as the “the Standards”).¹ In order to address how opportunities presented by the Standards can be realized for ELs—both understood and actualized—we focus on four particular areas emphasized by the Standards as necessary for career and college readiness and for becoming “a literate person in the twenty-first century”: engaging with complex texts; using evidence in writing and research; speaking and listening in order to work collaboratively and present ideas; and developing the language to do all of the above effectively. Each of these areas represents a shift from how language and literacy instruction has often been approached, both in mainstream English language arts (ELA) and in separate courses for ELs, such as English language development (ELD).²

The selected areas also highlight the fact that literacy instruction is a shared responsibility among teachers in all disciplines. In grades K–5, the standards articulate expectations for students in the areas of reading, writing, speaking and listening that apply to all subjects; in grades 6-12, the standards are divided into two sections—those specifically for ELA and those for history/social studies, science, and technical subjects. This interdisciplinary approach reflects the crucial role ELA teachers play in developing students’ literacy skills while at the same time acknowledging the impact other subject matter teachers have in students’ literacy development. The Standards acknowledge that college and career readiness requires reading with “an appreciation of the norms and conventions of each discipline” and writing with consideration of different kinds of tasks, purposes, and audiences.³ This focus on disciplinary literacy presents new challenges for both content-area teachers and English and ESL instructors.
For each of the domains included in the Standards (reading, writing, listening and speaking, and language), we first outline what the Standards call upon students to do, emphasizing the simultaneous challenges and opportunities for ELs. We then offer insights, derived from both research and theory, for addressing the challenges and realizing the opportunities. Before turning to each of the areas, however, it is important to emphasize the following overarching considerations:

• Any discussion about potential affordances for ELs must consider variation among ELs, including age, grade level, native languages, language proficiency levels, literacy background both in English and other languages, and quality of previous schooling.

• Instruction for ELs must include both “macro-scaffolding,” in which teachers attend to the integration of language and content within and across lessons and units, as well as “micro-scaffolding” during the “moment-to-moment work of teaching.”

• Because language and literacy practices vary from discipline to discipline, realizing opportunities for ELs must involve collaborative efforts across a number of different instructional settings, including ELA, ELD, and other content-area classrooms.

• Practices called for by the Standards, such as argument and critique, are grounded in particular socially and culturally specific values and practices that may or may not align with those of students from different backgrounds; students from non-dominant linguistic and cultural groups may position themselves in various ways vis-a-vis mainstream expectations.

• Socialization into new academic discourse communities involves not only the acquisition of new language and literacy skills, but also potential “internal and interpersonal struggles” and “emotional investment and power dynamics.”

Our comments in this paper can best be understood in the context of insights about language, literacy, and learning outlined in several other papers prepared for this project:

• All learning builds on students’ prior knowledge and experiences; instruction for ELs must consider and expand what ELs bring to the classroom.

• Instruction should provide apprenticeship for ELs in communities of practice with teachers and peers in order to develop students’ independence.

• Language development and cognitive development are interrelated and mutually dependent; ELs learn language as they learn content.

• Language can best be understood as action, rather than “form” or “function” alone; students learn to do things with language when they are engaged in meaningful activities that engage and challenge them.

• Literacy involves social practices as well as cognitive processes; reading and writing, as well as other forms of meaning-making, always represent activity (whether intended or not by teachers) in which participants have different purposes and take on different roles and identities.
• In order to develop the ability to read complex texts and engage in academic conversations, ELs need access to such texts and conversations, along with support in engaging with them.

• Learning languages involves expanding linguistic repertoires in order to engage in a wide variety of situations, with a wide variety of audiences, for a wide variety of purposes.

• With support, ELs can build such repertoires and engage productively in the kinds of language and literacy practices called for by the Standards for both ELA and other disciplines, even though their developing language will be marked by “non-native” or imperfect features of English.

1. Reading: Engaging with Complex Texts to Build Knowledge Across the Curriculum

The Standards require students to read and comprehend both literary and informational texts that represent steadily increasing complexity as they progress through school. Text complexity, according to the Standards, involves not only the grammatical features of a text and its vocabulary demands, but also elements such as the multiple levels of meaning embedded in a text, the explicitness with which the author's purpose is stated, the typicality of genre conventions, and the extent to which the text employs figurative language. The Standards require that 50% of the complex texts read by students at the elementary level be informational in character—shifting to 75% in high school—reflecting the role of texts in building students’ knowledge across K-12 disciplines and after high school.

Accessing and comprehending texts featuring complexity of the kinds outlined above present challenges for all students as they grapple with new and cognitively complex ideas and concepts, particularly for those who have had limited access to such texts either at home or at school. Those reading in a second language face additional challenges, as they are called upon to process “intricate, complicated, and, often, obscure linguistic and cultural features accurately while trying to comprehend content and while remaining distant from it in order to assess the content’s value and accuracy.” To meet this challenge, second language readers draw on a variety of potential resources, including knowledge of the (second) language they are reading in, literacy skills in their first language, reading comprehension strategies, background knowledge related to the target reading, and interest and motivation.

Beginning-level ELs in the younger grades learning to read for the first time face particular challenges, as they are attempting to learn to decode written text in a language they are at the very early stages of acquiring. The use and development of oral language is particularly important at this stage, as it serves as one foundation that students use to build early reading skills. The standards themselves emphasize the importance in the early grades of students' participating in discussions, asking questions, sharing their findings, and building on others’ ideas. It is important to note that research has shown that ELs can develop literacy in English even as their oral proficiency in English develops. Meanwhile, ELs’ early literacy experiences, including those in students’ first languages, support subsequent literacy development, and “time spent on literacy activity in the native language—whether it takes place at home or at school—is not time lost with respect to English reading acquisition.”

Throughout the grades, learning about ELs’ language and literacy backgrounds, interests, and motivations provides teachers with clues as to what supports might help students to compensate for the linguistic and textual challenges presented by different kinds of texts.
Understanding students’ knowledge and interests does not mean that only texts that already fit within ELs’ “comfort zones” should be assigned—indeed, one of the opportunities afforded by the Standards is the promise of access to a wide variety of texts that can expand those comfort zones. Leveraging students’ existing background knowledge, and building new knowledge, can be accomplished in a number of ways before and during a lesson or unit of study—without preempting the text, translating its contents for students, telling students what they are going to learn in advance of reading a particular text, or “simplifying” the text itself.\textsuperscript{14} Possibilities include pre-reading activities and conversations that access and build on students’ background knowledge and set up excitement and purpose for reading in a unit; text annotations that gloss crucial vocabulary or provide necessary contextual information without paraphrasing the text for students; and activities during and after reading that allow students to engage in knowledge-building with their classmates and teachers.\textsuperscript{15} Crucial to all of the above is teachers’ understanding that texts are approached differently for different purposes, and that students need opportunities to approach texts with these varied purposes in mind.\textsuperscript{16}

A consideration of students’ second language proficiency, literacy backgrounds, and background knowledge can also inform instructional efforts to enhance the strategic moves students can apply to engage successfully in independent reading across the curriculum—especially when called upon to read texts beyond their English language proficiency levels. Such instruction can do the following:\textsuperscript{17}

- Induce readers to consider (or even research) the topic at hand using more accessible texts (including those in a students’ L1 for ELs who read in their first languages) in preparation for reading more difficult texts as part of the same lesson or unit.

- Assist readers in deciding which words in a given text are critical for particular uses of the text and which can be skipped.

- Focus readers’ attention on meaning-critical grammatical structures (and how those might compare with how grammar is used to make similar meaning in students’ first languages).

- Build on and expand readers’ knowledge about how different kinds of texts are structured.

- Focus readers’ attention on specific features of text complexity by choosing authentic and original texts that emphasize one or two features at a time (such as a linguistically more accessible text that features multiple meanings, a lexically dense piece with a simpler grammatical structure, or a text in the students’ native language that includes the challenging text structures of an unfamiliar genre).

- Integrate a focus on vocabulary-building with meaningful activities centered around texts.\textsuperscript{18}

When envisioning how to support ELs’ reading of the kinds of complex texts called for by the Standards, and how to recognize students’ developing ability to do so, it is also important to consider how “comprehension” is defined and measured. As is the case with struggling readers in the general student population, ELs’ developing ability to “make decisions about a text and to subsequently evaluate and revise those decisions”—arguably the kind of reading valued by the Standards—may be masked, and even stifled, by instruction that only values “correct” interpretations of what a text “really” means on one hand, or the use of a pre-ordained set of “reading comprehension” strategies on the other. In other words, especially for ELs who may be called upon to read texts with increasingly unfamiliar content matter expressed in language that
is beyond their English proficiency levels, what is important to foster and recognize is ELs’ use of texts and textual evidence for sense-making, even if their inferences and processes do not initially match those of the more experienced readers or native speakers of English. This is not to say that a focus on “correct answers” is never justified. Especially in content area classrooms, such clarification may be crucial. But in terms of fostering—and recognizing—students’ ability to make sense of complex text, both literary and informational, ELs may be well served by opportunities to explore—and justify—their own “textual hypotheses,” even if their initial interpretations diverge from those of the teacher.¹⁹

2. Writing: Using Evidence to Inform, Argue, and Analyze

The Standards call upon students, by the time they graduate, to be adept at sharing information accurately to help readers better grasp a topic or concept, presenting arguments logically to defend interpretations or judgments, and crafting written language skillfully to achieve their purposes. The Standards draw on studies showing that a nexus of skills—using evidence, analyzing information in writing, and conducting research—is essential for success in the argument-based culture of universities as well as today’s diverse, information-rich professional environments.²⁰ As students progress through the grades, the Standards ask them to demonstrate their growing ability to cite specific evidence in defense of the claims they make as well as consider the strength of the evidence others provide when making arguments.²¹ The standards also incorporate and integrate a focus on research skills in order to prepare students to ask questions and solve problems independently. The goal is to ready students for college and careers so that they are able to conduct investigations, analyze information, and create products that reflect the increasing emphasis research receives in an information-based economy. In relation to research-based writing specifically, ELs not only face the common obstacles all students experience in attempting to gather, manage, and organize the flow of information; they also must analyze and evaluate what they read while negotiating a second language. This research process requires students to read complex texts and use evidence in writing (and/or orally) while navigating conventions of textual ownership and citations, an area that offers challenges for all students in an electronic age but that can be particularly challenging for EL students who have learned these culturally defined practices outside of U.S. academic settings.²²

Just as teachers can carefully scaffold the reading of complex texts, they can also assist ELs to develop the ability to write for the wide variety of audiences and purposes emphasized by the Standards. Like first language writing, second language writing develops gradually over time, with considerable variation in individual learners’ progress through different stages of development.²³ However, second language writing development is also distinct. Although second language writers are still acquiring oral language proficiency in English, they already possess age-appropriate oral language proficiency in their home language(s). Depending on their age and background, some may also have home-language literacy skills from which they can draw.²⁴ EL writers, however, are a diverse group. Some young children are exposed to writing for the first time in English-medium ELD or ELA classes. Others learn to write in more than one language in bilingual classrooms, at home, or in the community. At the secondary level, some ELs bring first-language literacy skills to the task of writing in English, but many write only in English, not having acquired home language literacy in the school or home. For individuals with prior literacy background, writing skills can transfer across languages, although questions remain regarding how these processes occur.²⁵ ELs’ opportunities for classroom writing also vary according to teacher expectations, course placement, and content area, and for students with limited exposure to English outside of school, writing development may occur very slowly.²⁶
Just as print exposure improves students’ long-term writing development in their first language, the features of texts read by ELs influence the writing they subsequently produce.\(^{27}\)

Several instructional strategies hold promise for ELs in meeting the Writing Standards. Overall, such strategies focus on developing what is called for by the Standards (e.g. writing different text types for different audiences and purposes and presenting knowledge gained through research) rather than ELs’ production of mechanically and grammatically “flawless” writing.\(^{28}\) Accordingly, writing instruction can do the following:

- Maximize the use of ELs’ existing linguistic and cultural resources by ensuring that students have meaningful ideas to write about, allowing them to use their home languages or varieties of language during the writing process, employing technology that students already use, and drawing upon their background knowledge, practices, and experiences.\(^{29}\)

- Provide ELs with meaningful exposure to the types of texts they will be writing, guiding students through the linguistic and rhetorical patterns found in different genres.\(^{30}\)

- Ensure that writing instruction creates meaningful opportunities to communicate rather than mechanical exercises for text production.\(^{31}\) These opportunities include interactions with peers and teachers about ELs’ writing and sensitive yet substantive feedback about the content of their writing at multiple points throughout the writing process.

In relation to research skills specifically, instruction can:

- Encourage students with L1 literacy backgrounds to draw upon this resource to help them locate, evaluate, and analyze information.

- Assist students in selecting reading and drafting strategies appropriate for varied research tasks.

- Provide explicit guidance on the conventions of textual ownership and citations in U.S. academic settings, alongside clear yet critical explanations of the purposes these conventions serve.

- Create opportunities that allow ELs to learn research processes by participating in teacher-guided and collaborative endeavors before attempting research independently.

Teachers can use such approaches to aid students in learning how to conduct investigations, analyze information, and create final products that meet the expectations of the Standards while strengthening and deepening the understanding students have of L2.

**3. Speaking and Listening: Working Collaboratively, Understanding Multiple Perspectives, and Presenting Ideas**

The Speaking and Listening Standards call upon students to listen critically and participate actively in cooperative tasks. They require students to build upon others’ ideas, articulate their own ideas, and confirm their understandings through informal, collaborative group interactions as well as formal presentations that integrate information from oral, visual, quantitative, and media sources for different audiences, tasks, purposes, and disciplines. The Standards also expect students to interpret information; explain how it contributes to target topics, texts, and
issues; and “present claims and findings by sequencing ideas logically and using pertinent
descriptions, facts, and details to accentuate main ideas or themes.”

As with reading, the comprehension of oral language requires a number of interrelated
knowledge sources. Effective listening comprehension also requires the use of strategies,
such as focusing on relevant parts of a message, making predictions, and monitoring one’s own
comprehension. At the same time, speaking and listening in the classroom involve more than
individuals acting alone. Students use interactional competence to participate in the social
context of the classroom, negotiating, constructing, and sometimes resisting norms of
interaction governing various typical classroom participation structures. Classrooms feature a
number of different speech events, each of which is “directly governed by the rules or norms of
the use of speech.” Even within a single speech event, norms can be quite complex.

For ELs to realize opportunities presented by the Listening and Speaking Standards, teachers
across the curriculum can support students by offering a wide variety of classroom discourse
structures. Many of the interactive structures conducive to building knowledge and discussing
ideas also hold promise for language development. Teachers can do the following:

• Engage students in individual, small group, and whole-class discussions that move beyond
  traditional initiation-response-evaluation structures to “bridging discourses” that encourage
  ELs to produce extended oral discourse and engage with academic registers.

• Develop collaborative tasks that require effective and linguistically rich discussions.

• Allow ELs to collaborate in their home languages as they work on tasks to be completed in
  English.

• Teach ELs strategies for using their still-developing English language proficiency to engage
  in different communicative modes. For example, listening comprehension activities can
  help ELs to “arrive successfully at a reasonable interpretation of extended discourse,” rather
  than to process every word literally, which is impossible even for native English speakers to
do.

4. Language: Using and Developing Linguistic Resources to Do All of
   the Above.

The Standards maintain that in order to be college and career ready, students need a
“firm control over the conventions of standard English,” but also that “they must come to
appreciate that language is at least as much a matter of craft as of rules.” According to the
Standards, students must be able to “choose words, syntax, and punctuation to express
themselves to achieve particular functions and rhetorical effects.” It is important to understand
that ELs, by definition, will use “imperfect” (i.e. non-native-like) English as they engage in these
functions and achieve these effects. By focusing on language as it relates to communicative and
academic endeavors, rather than merely as the acquisition of “good” English, teachers can help
students develop and use grammatical structures, vocabulary, and written and oral conventions
as resources for making meaning, for learning, and for communicating with an increasing
number of audiences for an increasing number of purposes.

In the context of the expectations for all students articulated by the Standards, “language
instruction” for ELs can no longer be envisioned as isolated from the context of meaningful and
engaging academic work. Although the decontextualized teaching of discrete elements of a second language (e.g. verb tenses, grammatical structures, vocabulary) may be effective for inducing the use of those elements on restricted tasks and tests that highlight them, it is unclear whether such instruction is effective for fostering the use of those elements in wider communication.\textsuperscript{45} This is not to say that an explicit focus on language is not called for, but rather that such a focus must occur in conjunction with, and in the service of, meaningful academic work across the curriculum.\textsuperscript{46}

In supporting the development of ELs’ language, it is also important to keep in mind that all school-age children (barring either extreme impairment or severe early childhood abuse and isolation) already have the linguistic resources in at least one language to engage in a wide range of communicative settings.\textsuperscript{47} All students, therefore, have first-hand knowledge of the conventions and the rhetorical craft of language as used in their own communities of practice.\textsuperscript{48} In fact, children who are in the process of developing more than one language may have a heightened awareness of such functions and effects because they use two or more languages.

At the same time, students’ linguistic backgrounds will be more or less closely aligned with the varieties of language privileged in school, and it is undoubtedly in the interest of ELs to expand their linguistic repertoires to include those varieties. In supporting students to do so, a couple of final points are important to keep in mind:

- ELs’ incomplete acquisition of standard varieties of English should not be interpreted as students’ inability or unwillingness to participate in a wide range of learning, language, and literacy practices across the disciplines, including those called for by the Standards.

- With appropriate supports, ELs’ participation in the key practices called for by the Standards—especially those highlighted in this paper—can promote the development of both language and literacy.

**Conclusion**

We conclude by pointing out that “shared responsibility” for preparing ELs for the language and literacy called for by the Standards rests not only with teachers across the disciplines, but also with curriculum developers, textbook writers, assessment specialists, teacher educators, administrators, researchers, policymakers, and others. Our hope is that the brief comments in this paper can serve as a starting point for envisioning what role each of us—individually and collectively—might play in realizing the opportunities potentially afforded to English Learners by the Standards.

9 See especially VanLier & Walqui (2012); Hull (2012); Wong Fillmore & Fillmore (2012); Walqui & Heritage (2012)

10 See Appendix A of the ELA and disciplinary literacy standards for further information about how text complexity can be defined and determined.

12 While research on second language readers has only begun to study the ways in which these various factors interrelate, it is likely that second language readers use the resources they have in some areas to compensate for those they are lacking in others (Bernhardt, 2011).

13 Riches & Genesee (2006); see also Goldenberg & Coleman (2010).

14 Available research on second language reading indicates that text simplification is ineffective for promoting comprehension and may even be counterproductive (see Bernhardt, 2011, pp. 59-60).

15 See Walqui & vanLier (2010) for helpful suggestions for creating such activities.

16 Also important to understand is that readers play multiple roles when approaching any text. Gibbons (2002) draws on Luke and Freebody (1990) to point out that readers are simultaneously code breakers, text participants, text users, and text analysts; see also Schleppegrell & Colombi (2002).

17 Many of these strategies are elaborated upon in Bernhardt (2011).

18 For examples, see Kelley, Lesaux, Kieffer, & Faller (2010) and Scott, Skobel, & Wells (2008).

19 This paragraph draws heavily from Auermann (2008), and the quotations are from that source.

20 See Graff (2003); Postman (1997); Williams & McEnerney (n.d.).

21 Using evidence is particularly emphasized in Reading Standard 1 and Writing Standard 9.

27 For the effects of exposure to print in the L1, see Wagner and Stanovich (1996); for the impact of texts read on L2 writing, see Samway and Taylor (1993).

29 See the recent collection edited by Manchón (2011) regarding the use of writing in the learning process. For uses of the first language while writing, see Fu (2009), Kibler (2010), National Council of Teachers of English (2012), and Souryasadak & Lee (2007). Black (2005) and Smythe & Neufeld (2010) suggest the use of various technologies to

Such instruction can focus explicitly on the role of grammatical and lexical features in making meaning for different audiences and purposes (e.g. Achugar, Schleppegrell, & Oteiza, 2007; Aguirre-Muñoz, Park, Amabisca, & Boscardin, 2008; Gebhard, Harman, and Seger, 2007; Gebhard & Willett, 2008; Schleppegrell, 2004).

31 For an example, see Bunch, Lotan, Valdés, & Cohen (2005); see also Valdés (2001) and Valdés & Sanders (2006).

32 Standards, p. 49.

33 Sources of information required for listening comprehension include schematic knowledge (factual, sociocultural, and discourse-related background information), contextual knowledge (physical settings, participants, and what has been/will be said), and systemic knowledge (semantics, syntax, and phonology) (Anderson & Lynch, 1988).

34 See Anderson & Lynch (1988) and Goh (2005). It is also important to understand that because comprehension rests on such a broad base of knowledge and strategies relevant to a given situation, the fact that ELs and their interlocutors encounter difficulties in spoken interaction is not surprising: second language listening research has documented a range of lexical, grammatical, and conceptual causes of misunderstandings for non-native speakers in spoken interactions (Rost, 2002).

35 Kazden (1986, 2001); Mehan (1979); Philips (1972, 1983).

36 Hymes (1972, p. 56).

37 In classroom presentations, for example, students are often asked to manage the floor, either as individuals or as a group, while also being ready to respond to the teachers’ unpredictable interjections and directives at moment’s notice, as well as often engage with the student audience’s questions and comments after the delivery of information (Bunch, 2009). Meanwhile, during the entire presentation, students are called upon to address different audiences simultaneously. In almost every presentation, students are asked to address their fellow classmates while knowing that the teacher is the audience who will ultimately be evaluating them. Some presentations additionally call for students to imagine that their audience knows nothing about the topic they are presenting on (even if this is not the case), or to engage in a roleplay in a contemporary or historical context. Engaging in whole-class discussions or group work involve different, but similarly complicated, rules of interaction and audience engagement.

39 See Mehan (1979) and Sinclair & Coulthard (1975) for an overview of the three-part classroom discourse structure; the term “bridging discourses” comes from Gibbons (2006); see also Wells (1999) and Valdés (2004).

42 These include the interpersonal mode, which requires moment-by-moment, unplanned interaction but affords the opportunity for immediate clarification of meaning; the presentational modes, which allows for planning but requires anticipating audiences’ needs; and interpretive mode, which does not require production but does not generally allow for clarification of understanding (National Standards in Foreign Language Education Project, 1996).

44 Standards, p. 51.

45 See Valdés, Capitelli, & Alvarez (2011) for a review of the literature on this topic.

46 For examples of integrating a focus on discrete language features with meaningful academic work, see Gebhard, Harman, & Seger (2007); Schleppegrell (2004), Kelley, Lesaux, Kieffer, & Faller (2010); and Scott, Skobel, & Wells (2008).

47 All students, regardless of their language or cultural background, speak one or more variety of a home language, and that variety is associated with students’ geographical background, racial and ethnic community, and identity affiliations; there are no speakers of any language without an “accent,” and, from a linguistic standpoint, there are no varieties of English (or any other language) that are superior to any other variety (see MacSwan, 2000; MacSwan, Rolstad, & Glass, 2002; Valdés et al., 2005).
